

Alfresco Integration

EzeScan has been providing advanced batch scanning solutions to its document management clients since 2002. With native Alfresco integration, EzeScan enables documents to be seamlessly scanned and registered into Alfresco all without the need for additional scripting.

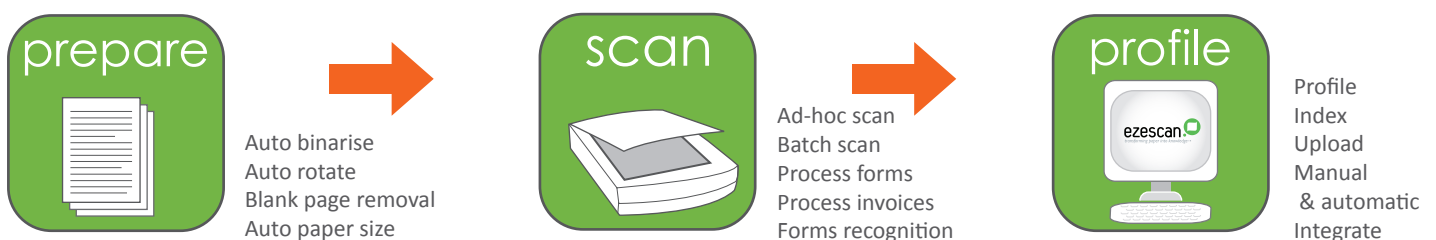

EzeScan delivers “out of the box” Alfresco integration via any TWAIN or ISIS scanner, or MFD (multi-function device) to provide an effective way to batch scan documents, forms and invoices directly into Alfresco.

EzeScan can also provide a combination of solutions to suit your needs:

- ➡ as a personal workstation solution, with a single scanner and desktop
- ➡ as a workgroup environment, using separate scanning and indexing workstations
- ➡ as an enterprise server solution, where a number of input devices can be monitored for upload of images and metadata to various output systems including Alfresco.

EzeScan production scanning solutions are built on our base product EzeScan PRO (which includes batch separator technology, inbuilt OCR, and FOI support). It can then be extended to suit your specific document scanning requirements through the addition of optional power indexing and automated capture technologies designed to reduce the time it takes to scan and profile documents.

Reduce bottlenecks

Utilise advanced features

EzeScan also supports advanced Alfresco features including:

- ➡ Import TIF and PDF documents directly
- ➡ Redacted versions for FOI requests
- ➡ Browsing Alfresco sites for folders
- ➡ Adding one or more document Aspects
- ➡ Populating Aspect Properties.

Alfresco Integration

EzeScan can integrate with Alfresco in 3 possible configurations. Solutions range from basic manual data entry workstations to highly automated forms processing systems, all without a per-page scan charge.

Modular design

EzeScan PRO

Use EzeScan PRO to scan one or more documents and place the output files into a temporary output directory.

EzeScan can separate, OCR, rotate images and delete blank pages automatically. Document registration is initiated from within Alfresco and is carried out using a standard document upload and registration process.

EzeScan PRO + EDRMS

Use EzeScan PRO + EDRMS to batch documents and profile each document directly into Alfresco from EzeScan.

Document registration is initiated from within EzeScan itself using the EzeScan EDRMS connector and document profile form. This provides a quick method for profiling batches of unstructured or structured documents into Alfresco without wasting valuable time double handling the scanned images.

EzeScan DM Bundle

The EzeScan DM Bundle combines the previous two options with the additional flexibility of being able to scan and profile documents, forms & invoices directly into Alfresco from EzeScan without having to launch a profile form, providing higher levels of automation.

The power indexing capabilities of the KFI & UPLOAD modules guide the operator to input, capture and upload both scanned documents and index data seamlessly into Alfresco at speeds previously unattainable.

With this configuration you can type in a field value, choose a lookup list value, or capture field values from documents (using the inbuilt OCR module, or optional BCR or ICR modules) and then use them to populate the Alfresco Categories. You also have the choice to reuse fields automatically, or auto populate, saving considerable time not having to reselect the same values. This option provides the fastest and most effective method for profiling batches of documents into Alfresco. Select the modules you need today, safe in the knowledge that you can add modules like Barcoding or ICR, at a later time.

The EzeScan Advantage

EzeScan provides fast, cost effective business solutions including simplified back scanning, automation of invoice processing, forms data extraction, mailroom/correspondence automation and highly integrated EDRMS imaging. Compatible with all major scanners and with over 600 installations in Australasia, North America, EMEA and the UK, EzeScan is your ideal batch-scanning solution.

Who is Outback Imaging Pty Ltd?

Outback Imaging is a research and development company specialising in document capture. EzeScan is Outback Imaging's flagship document scanning product suite. Our products enable clients to substantially reduce the cost of deploying document processing solutions for unstructured, semi structured and structured (forms based) hardcopy documents.

To request an evaluation copy of EzeScan or to see a product demonstration, please contact your local EzeScan representative.
