Digitally transform your business with EzeScan's Enterprise Capture Solution and your multifunction printer.

EzeScan's advanced capture solution is now available for MFP's using PaperCut MF and EzeScan Remote Indexing Application (RIA). With a minimum number of keystrokes, users can now effortlessly scan and register documents directly into 40+ ECM solutions and automatically initiate intelligent business processes.

CAPTURE YOUR DOCUMENTS FASTER

For many businesses, staying competitive, profitable and successful means being able to action information in a timely manner. Digital transformation initiatives have seen many paper-based processes disappear, however the ones that remain have become a priority for businesses looking for greater operational efficiencies.

Converting paper to digital formats has been possible for over 20 years, however the paper shuffling continues and many organisations still scan their documents to be actioned.

Many businesses are now searching for technology solutions that;

- capture documents as they enter the business for faster action
- provide an agile working environment with no geographical barriers
- are easy to deploy and use
- can manage document access and workflows
- can drive document handling costs lower
- can improve user productivity and allow the business to grow

EzeScan's Enterprise Capture solution for MFP's directly addresses these requirements, to allow users to capture, register and initiate a business process accurately and effortlessly, anywhere, anytime!

With a minimum number of keystrokes a user can simply select the kind of document they wish to capture. EzeScan uniquely aligns the business process with the way the document is captured and how it moves through your business. More importantly your documents will be named correctly, distributed, workflowed, filed and seamlessly uploaded into your corporate business systems.

When using EzeScan's Enterprise Capture solution with your MFP, your organisation just got a whole lot smarter!

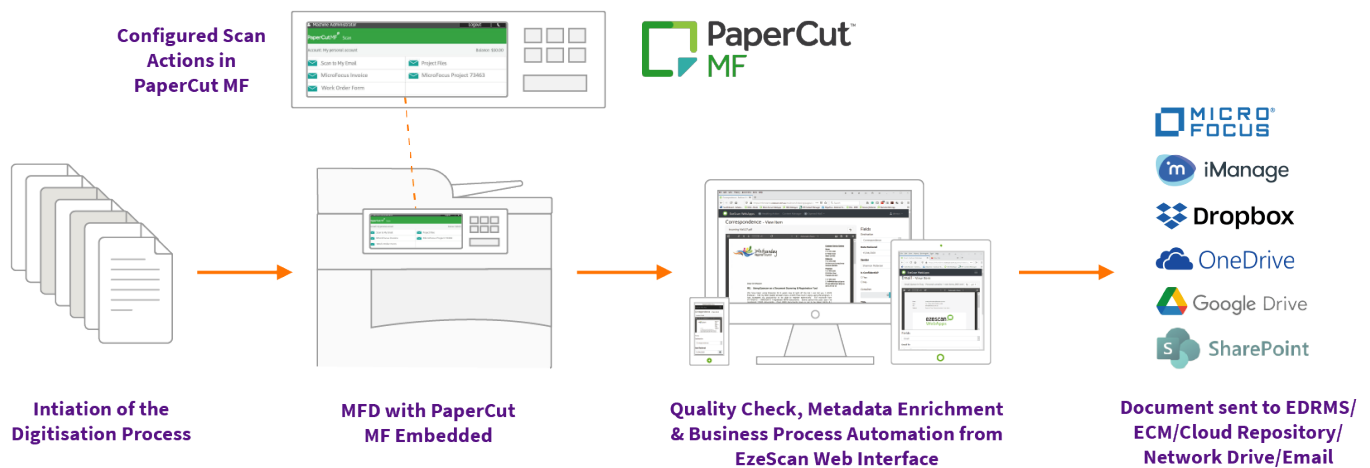

REMOTE INDEXING ASSISTANT WEB APPLICATION

EzeScan WebApps are powerful business process automation applications designed to deliver hardcopy document and electronic file capture, conversion, processing and routing, directly to the desired network location or supported line of business applications.

EzeScan's intelligent capture solution for MFP's provides a direct integration via the PaperCut MF solution on the MFP, for a user to initiate the capture of business documents. Based on the user selection, the relevant digitisation standards are automatically applied and the documents are submitted to the EzeScan WebApp Server (EWA) for processing. Users or assigned business units are automatically notified via email of documents with a web link to the EzeScan Remote Indexing Assistant (RIA) WebApp. With no client software required, browser access ensures PC, Mac or mobile smart device compatibility.

The EzeScan Remote Indexing Assistant (RIA) WebApp can be configured to allow a user to QA, validate and profile captured documents. With the use of configured drop-down menus and database lookups, documents are automatically named based on business standards and correctly filled or routed.

HOW IT WORKS

THE EZESCAN ADVANTAGE

EzeScan provides fast, cost effective business process automation solutions including simplified document back scanning, accounts payable, data robotic process automation, forms data extraction, mailroom/correspondence automation and highly integrated EDRMS capture. With thousands of installations in Australasia, North America and the UK, EzeScan is your ideal digital transformation provider.
